

NEW YORK STATE AGRICULTURAL EXPERIMENT STATION,
GENEVA, N. Y.,
METEOROLOGICAL RECORDS 1883 to 1957, INCLUSIVE.

The weather has always been of major concern to scientists at the Experiment Station. In his second annual report in 1883, Director E. Lewis Sturtevant discusses the "climate of Geneva" as revealed by statistics published by Professor W. D. Wilson of Hobart College in 1867. Professor Wilson's observations were for a 12 year period.

Temperature records have been kept at the Station since 1883. Precipitation by rainfall only was recorded from June, 1882 through 1917. Beginning in January 1918, total precipitation in inches of rainfall and snow reduced to equivalent rainfall has been recorded to the present time. From October 1930 to the present snowfall only has also been recorded for the months of October, November, December, January, February, March, April and May.

The Station has served as an observation point for the U. S. Weather Bureau for many years, reporting temperatures and precipitation only. In more recent years solar radiation has been recorded for the information of Station personnel.

Tabulations of records maintained at the Station follow for the period of 1883 to 1957, inclusive.

April 1, 1958.
